

2009 Ontario QSO Party

Another great get-together of Ontario Operators and their friends!

Although no one reported a Clean Sweep of the 52 Ontario Multipliers, all of them were active and it was great to see Manitoulin, Rainy River, Kawarthas, Norfolk and others showing up in logs. With a few more sunspots they will be even more readily available and a Clean Sweep should again be possible.

Congratulations to the three stations that set new Category Records and the thirty-three that achieved new Location Records. The Rover/Mobiles provided many multipliers while visiting as many as 17 areas, no mean feat with the area sizes involved.

Special thanks to all the U.S.A. and overseas stations that provided those extra multipliers to the Ontario stations. Overall activity was up from last year and we should be able to make it an even bigger event in 2010.
